Physical Distance ScalesTM for Independent Medical Weighing and Measuring

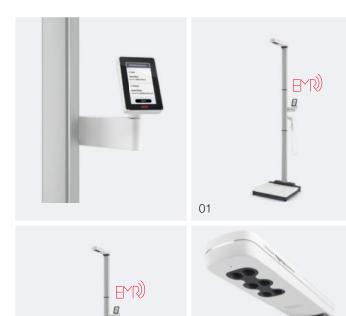

As COVID-19 propels heightened pressures and increased patient volumes in ER departments and hospitals, it's essential to have medically-validated scales and measuring systems at clinician's fingertips.

Medical products from seca are providing vital parameters that have a direct relation to the treatment of the disease in frontline care. Precise patient total body weight measurements are used as a basis for a necessary part of the calculations of tidal volume used for ventilators, and dosing of anesthetics and blood pressure medications for ventilated patients who are in critical courses of the COVID-19 disease.

seca Scale-up Line (seca 654)

EMR-validated ultrasonic measuring station with ID-Display™

- + Flat scale seca 654
- Ultrasonic height measurement seca 257
- + Capacity: 360 kg
- + Graduation: 50 g
- + Measuring range: 60 220 cm
- + Graduation of measuring range: 1 mm

Order code (01): SE654US OR: SE654HR

= Handrail only (no height)

+ Independent-use scale

EMR-validated ultrasonic measuring station with ID-Display™ and handrail

- + Flat scale seca 654
- + Handrail seca 455
- + Ultrasonic height measurement seca 257
- + Capacity: 360 kg
- + Graduation: 50 g
- + Measuring range: 100 220 cm
- + Graduation of measuring range: 1 mm

Order code (02): SE654HRUS

- + Hands-free ultrasonic height measurement
- + Voice guidance aids personnel
- + Rapid measurement process within seconds
- + Large platform made of seca Bearclaw Glass® break-resistant for extreme durability and hygiene

seca 286

02

EMR-Validated Ultrasonice Measuring Station

- + Flat scale seca 654
- + Capacity: 300 kg
- + Graduation: 50 g
- + Measuring range: 60 210 cm
- + Graduation of measuring range: 1 mm
- + Independent-use scale
- + Touch-less ultrasonic height measurement
- + Voice guidance
- + Adheres to highest hygiene standards
- + Maintain the recommended distance from the patient
