

AUDIMAX II+

SOFTWARE FOR SA 201-204

AudiMax II+ is a Windows based application for SA 201-204 pure tone audiometers.

The audiometers can store audiograms together with corresponding patient ID in their internal non volatile memory. AudiMax II+ allows the stored test results to be downloaded to a PC through the standard RS 232 serial port. Downloaded audiograms can be viewed on the screen and saved to patients in the AudiMax II+ database. Final report printing facility and possibility of comparing different test results of the same patient are also available. AudiMax II+ can be run either as an individual application or under Kristály 1.1 occupational health care and Ursula 2.1 general practice softwares. Three different languages (English, Spanish and Hungarian) are available, support for other languages coming shortly (Q2 2012) Easy operation is supported by online help menu.
