STOP TURNING YOUR BACK ON YOUR PATIENTS
INTRODUCING THE ANESTHESIA DELIVERY SYSTEM THAT PUTS YOUR PATIENTS FRONT AND CENTER
Clinical controls are centrally located for ease-of-use.

Touchscreen display with intelligent navigation and a full range of ventilation modes.

Rotating breathing circuit lets you bring anesthesia delivery closer to your patient.

Signature lighting emphasizes active controls.

WELCOME TO YOUR CLINIC
Until now, anesthesia delivery systems were designed from a technology perspective. While this is obviously key — after all, they must do their job — we saw that it was not enough. Rather than look to functionality and reliability as the end in itself, we saw them as the points of entry and asked, “how could we make it even better?”

We then interviewed anesthesiologists from across the globe, observed a range of anesthesia delivery systems in use, and looked at the latest research in the field of ergonomics.

We focused on everything, so you can truly put your focus on your patients. Welcome to ARKON®, the anesthesia delivery system built from your perspective, giving you the maximum in functionality, comfort, and control.
